

**TTC
Protocol**

COMPANY NAME: **TTC PROTOCOL**

COMPANY DESCRIPTION: **SOCIAL NETWORKING ECOSYSTEM ON THE BLOCKCHAIN**

SERVICE: **SMART CONTRACT AUDIT, PEN TESTING, AND BUG BOUNTY**

Learning from other companies' mistakes, TTC Protocol decided to ensure the protection of their users at early stages and partnered up with Hacken, the largest professional white hat hacker company and community in the blockchain, to collaborate and build a safer blockchain.

WHAT IS TTC PROTOCOL?

TTC Protocol is one of the largest social networking ecosystems on the blockchain, with over 23 million users. It aims to provide a brand new social experience for users all over the world by connecting different DAPPs in the ecosystem of TTC Protocol with common guidelines for every participant. Moreover, TTC is the circulating currency, incentivizing all participants in the ecosystem.

BASIS FOR SECURITY COOPERATION

TTC Protocol is aware of risks and challenges themselves to make their environment as secure as possible. Hacken and TTC Protocol communities will work together to grow a secure and transparent blockchain ecosystem, making sure that user data is protected in a world of data leaks.

TTC Protocol and Hacken aim to have a long-term partnership on a subject of security, starting with the improvement of blockchain tool and TTC Wallet. Several days ago, specialists from Hacken started the penetration testing of TTC test-net and a bug bounty program was launched on HackenProof. TTC Protocol accepts all reports that demonstrate vulnerabilities for the blockchain security and have real-life impact. Soon, the security audit will be performed to reveal bugs and vulnerabilities in the smart contract (if any).

"We aim to build the most user-friendly and secure social network protocol on the blockchain. We are thrilled to collaborate with hundreds of white hat hackers around the globe to build a safer blockchain for billions." – Brian Cheong, CEO of TTC Protocol.

Moreover, TTC Protocol will showcase its philosophy and security strategy in front of world's top hackers, security experts, and blockchain community at the HackIT forum on October 8 to 11 in Kyiv, Ukraine. TTC Protocol becomes a lanyard sponsor at the forum.

"Finding bugs is a priority for us as a cybersecurity company. The highest level of protection that we offer customers is a core principle of our business," said Dmytro Budorin, CEO of Hacken. "Hacken team is excited to bring a new mission-critical asset to the white hat hackers community with the aim of protecting the sensitive TTC Protocol data. We're looking forward to taking a page in their history."

ABOUT HACKEN

At Hacken, we take security extremely seriously, and all the checks are performed according to the highest standards. If you have any questions about the topic or need a consultation, feel free to contact our Team!
